Project: Tank Room Protection

The Problem

One of the tank rooms at this brewery had been earmarked for immediate refurbishment in order to comply with Health & Safety requirements.

The brewery was looking for high performance protection system that would offer a hygienic, seamless finish for the walls and ceilings and a durable, hygienic finish for the internal and external surfaces of the steel storage tanks.

Solution

The walls were suitably prepared, primed with Uni-Tech GP Primer and then coated with our water-based epoxy coating Wall- Tech WB.

Wall-Tech WB has been developed for use on internal wall surfaces and is ideal for applications in food and beverage processing establishments, where low odor and hygiene conditions are important. It has been tested to BS 476 Parts 7 & 6 and given Class 1 and Class 0 fire performance ratings respectively.

The storage tank dish ends were refurbished using our Uni-Tech UV system. The internal surfaces of the tanks were also protected using Chemi-Tech PW.
