- April 15th and 16th MDOT Bridge and Structure Conference in Novi, MI
- Late May or 1st Friday of June, annual USI Customer Appreciation Golf Outing

3M 323 in Action

Thoughts from Doug Klingensmith:

February is great month to be planning your Spring and Summer Capital Projects and we can help. We have many long-term protection systems that can make your capital investments last two to five times longer. However, as you do site inspections, don't be intimidated to call us about small projects too. We can often prevent small deterioration or a corrosion issue becoming expensive by stopping it now. Examples might be:

- Rusty doors and door frames from winter salt. Use **3M** Chemi-Tech 152LV is a proven solution and can keep from having to buy a new \$1200 door and frame.
- Leaking Pipes. Try Metal Tech SG and PR or our Metal Tech EG with Chemi Tech 152LV and Reinforcement Tape.
- Damaged concrete steps and walk ways. If we get to it soon enough we can help prevent expensive repairs this summer and save you dollars.
- Leaking Roofs. Seal Tech AW can stop leaks from causing wall, ceiling and floor damage, reducing water damage and saving you aggravation and money.
- We have many other solutions, and while I am thinking about it don't forget about Valentine's Day, February 14th. Your significant other will appreciate that you cared enough to think about them.

Happy Valentines Day,

Doug Klingensmith
