July 2009

Corrosion happens every second, everyday, 365 days a year! IT WON'T STOP! So perhaps it is time to find out how the corrosion protection specialists at USI can help you. See how we reduced labor cost for this metro park by protecting the environment and eliminating the need for sandblasting with our **3M** Corro-Tech GP (liquid aluminum primer) and **3M** Poly-Nox- a Flexible acrylic with cold weather flexibility down to -40 F, UV stability, good dirt shedding characteristics and 250% elongation.

This park authority also benefited by specifying our product so that all the contractors were on the same playing field. This helped them make a better decision on labor cost by comparing apples to apples with our **3M** Bridge Coating Specification engineered for their specific environment.

Product for Surface Preparation:

Need a 2 to 4 mil anchor profile but can't sandblast because of environmental concerns, skilled labor issues or cost? Just MBX it.

Ideal to use with **3M** 323 on smaller diameter 8 and 6 inch pipe or with **3M** Chemi-Tech 152LV designed for minimal prepared and wet surfaces. Call us to order or for more information or a free demonstration.

323 Project:

See **Doug Klingensmith** and **Joe Janik** hard at work with this 323 project.

USI's Top 3- 4th of July Celebrations

1. Boston, Massachusetts
2. Washington, D.C.
3. Chicago, Illinois

Doug's thoughts:

1. July is a very hot month and middle of the coating season. So, make sure you stay well hydrated with lots of water. Take water breaks every hour and wear clothing when possible that wicks away moisture from your skin instead of trapping it to keep you cooler. Also don't forget the sun block.

2. 4th of July is time to remember our founding fathers and that our country fought for its freedom. Sometimes I think we have confused safety for freedom? Have you? Freedom is never free and it right worth fighting for.

Happy 4th of July from Your Unconventional Solutions Team
