Project: Car Factory- Floor Protection

The Problem

The tiled floor in an area of this car factory had become badly damaged due to the high level of use.

The client required a high performance self-leveling system, which would completely resurface the worn and eroded floor and offer long-term protection.

Solution

The tiles were suitably prepared; ensuring the surface to be coated was clean, dry and free from contaminants and treated with Floor-Tech SP Primer. Our three component, solvent-free epoxy self-leveling screed Floor-Tech XSL was then applied.

Floor-Tech XSL provides outstanding abrasion, impact and chemical resistance. It also exhibits the ultimate application and leveling properties. The client was pleased with the results of the application.
