## Project: Concrete Repair

### The Problem

This was part of a chemical company where spillages of chemicals were causing damage to concrete surfaces. The concrete was becoming very badly damaged and without protection would soon become completely unacceptable therefore creating a health and safety hazard.

A system was required that would repair and offer long term protection to the concrete floor.

### Solution

All loose, damaged and contaminated concrete was removed to ensure a sound substrate was left. Floor-Tech SP Primer followed by Floor-Tech RS was then applied.

Floor-Tech RS is a high performance resurfacing screed which is simple and safe to use, it provides excellent impact and abrasion resistance and is ideal for concrete surfaces subject to chemical attack.

To provide additional protection, the entire area was then coated with Chemi-Tech CR, our chemical and corrosion resistant lining.
