## Project: Leaking Pipe Repair

### The Problem

On new year's day this Drain Commission had a bad leak on a 3 inch "T" and had no replacement parts they could use. Fortunately they had ordered USI Pipe Repair 4 months earlier.

### Solution

They used the Metal Tech PR and were able to make an online repair at 80 psi without shutting down. They also had no way of getting a 3 inch "T" so it would have meant a two or three day project.

This repair has been in service for over 20 months so it was a short term repair that gave long-term results. Think of USI as your Repair or Protection Specialist as an alternative to expensive replacement cost.
