

Project: Office Floor Refurbishment

Problem

A client had moved into a new office complex. The floor was not protected and therefore unsuitable for their environment. A complete floor refurbishment was carried out.

Solution

Prior to the application of Floor Tech SP Primer, the office floors were cleaned and all dust and loose materials were removed. The primed substrate was then coated with Ceramic Enhanced, Floor Tech HB, which has been developed to provide long term floor protection.

The end result, as seen in this photograph, is testament to the high quality and performance capability of 3M Thortex Flooring products.
