Project: Spectator Canopy Refurbishment

The Problem

The spectator canopies at the RFK Stadium in Washington, home to the National Football League, Washington Redskin until 1996, had been earmarked for refurbishment.

The Stadium Manager required a high performance liquid applied roofing membrane to provide long-term protection to the canopies.

Solution

The substrate was suitably prepared, ensuring dirt and loose debris had been removed prior to the application of Poly-Tech BP Primer. Our single component, water-based elastomeric roof coating Poly-Tech was then applied.

Poly-Tech is a roof protection system, which has been developed by Thortex for the long-term protection of all types of roof surface. It has outstanding waterproofing and weatherproofing properties and offers optimum levels of UV resistance, flexibility and durability.
