Project: WWTP Clarifier Tank

The Problem

The weather has been taking its toll on the Clarifier Tank at this Waste Water Treatment Plant, causing the concrete to erode and begin to crumble.

The management at this plant needed the eroding concrete to be repaired with a product that would also provide protection against the elements.

Solution

The concrete surface was scarified to remove any existing coating that remained and to obtain a smooth profile. The crew used Thortex Floor-Tech SP Primer to seal the surface and then applied Thortex Floor-Tech RS to rebuild the wall.

Thortex Floor-Tech RS is a high-performance, re-surfacing screed designed for use on concrete that is subject to abrasion and chemical attack.

Thortex Floor-Tech RS is recommended for concrete and floors even in the most aggressive environments.
