Project: WWTP Water Pump Ring Housing

The Problem

The Water Pump Ring Housing at this Waste Water Treatment Plant was badly damaged and not functioning at peak efficiency.

The company was looking for a cost effective alternative to buying new equipment.

Solution

The surfaces of the Water Pump Ring Housing were cleaned and then abrasive blasted. Cerami-Flex EG was applied by spatula making sure that no air was trapped. Cerami-Flex FG was then applied by brush to create a smooth even surface.

Cerami-Flex EG is a high-performance, solvent-free, flexible, poly-ceramic compound designed for the rebuilding and resurfacing equipment operating in a fluid flow environment. Cerami-Flex FG is the fluid grade formula.

Both Cerami-Flex EG and Cerami-Flex FG provide outstanding protection against impingement, entrainment, cavitation, erosion and corrosion.
